## General Notes

Overall, the content looks good. I think the text over image is a little difficult to read. It might be better to just have text on a white background and more white space on the page.

## Navigation

It would also be beneficial to have a consistent navigation bar on all the pages to improve the user's ability to navigate throughout the website. It would also be helpful to have titles on each of the pages so the user knows what each segment of information is about.

## Images

<https://www.flickr.com/groups/snowleopards/pool/page5> here's a link with some cool hi-res images of snow leopards

## Reference

I made a quick wireframe to show what I mean by white space and a navbar. It does not have to look exactly like this but this is just a possible direction to take.

## Characteristics

### Appearance

The snow leopard's fur is whitish to gray with black spots on head and neck, but larger rosettes on the back, flanks and bushy tail. The belly is whitish. Its eyes are pale green or grey in color. Its muzzle is short and its forehead domed. Its nasal cavities are large. The fur is thick with hairs between 5 and 12 cm (2.0 and 4.7 in) long. Its body is stocky, short-legged and slightly smaller than the other cats of the genus *Panthera*, reaching a shoulder height of 56 cm (22 in), and ranging in head to body size from 75 to 150 cm (30 to 59 in). Its tail is 80 to 105 cm (31 to 41 in) long.[23] It weighs between 22 and 55 kg (49 and 121 lb), with an occasional large male reaching 75 kg (165 lb) and small female of under 25 kg (55 lb). Its canine teeth are 28.6 mm (1.13 in) long and are more slender than those of the other *Panthera* species.[25] In relation to the length of its skull and width of its palate, it has large nasal openings, which allow for increasing the volume of air inhaled with each breath, and at the same time for warming and humidifying cold dry air.
