Project Title: Snow Leopard Website

I want to build my site to have easy navigation between multiple information pages instead of just a continuous scroll feature. There are plenty of great photos I could use.

- **Home Page**-I would like to make the main home page with a full-screen picture and have a sleek nav bar above the image that would lead to various information pages-This the main page I would want to get across the beauty of the animal and importance of conservation
- **Distribution & Habitat**
- **Behavior & Ecology**
- **Hunting & Diet**
- **Life Cycle & Reproduction**
- **Conservation Efforts**
- **Sources**-This Page will include a list of sources including the Wikipedia page, as well as sources for photography and other credits that need to be provided.
